PRODUCT WALKTHROUGH

HAZ-CRM

Donor, case and aid management for Egyptian charities: one system from the first donation to the last food box.

نظام إدارة المتبرعين والحالات والمساعدات للجمعيات الأهلية

Arabic-first
Built right-to-left for Egyptian staff

Offline
Runs on one office PC; no internet needed

Cloud-ready
Same app on a secure HTTPS server

All names, numbers and IDs in this document are fictional sample data.
Built for the Hassan Abbas Zaki Association · October 2026

THE PROBLEM

Most neighbourhood charities run on receipt books and private spreadsheets

A typical association collects zakat, sadaqa and sponsorships from hundreds of donors and supports dozens of families. The work is real; the tools are not:

Paper receipts

Donations are written in carbon receipt books. Totals by purpose (zakat vs. orphans vs. Ramadan boxes) are added up by hand at month end.

One spreadsheet per person

The researcher, the accountant and the manager each keep their own Excel file. Nobody has the full picture of a family or a donor.

Duplicate aid

Nothing stops the same family from being registered twice under a slightly different name, and receiving help twice while others wait.

Management is blind

"How much came in this month, and how much went out?" takes a day of asking around instead of a glance.

No trail

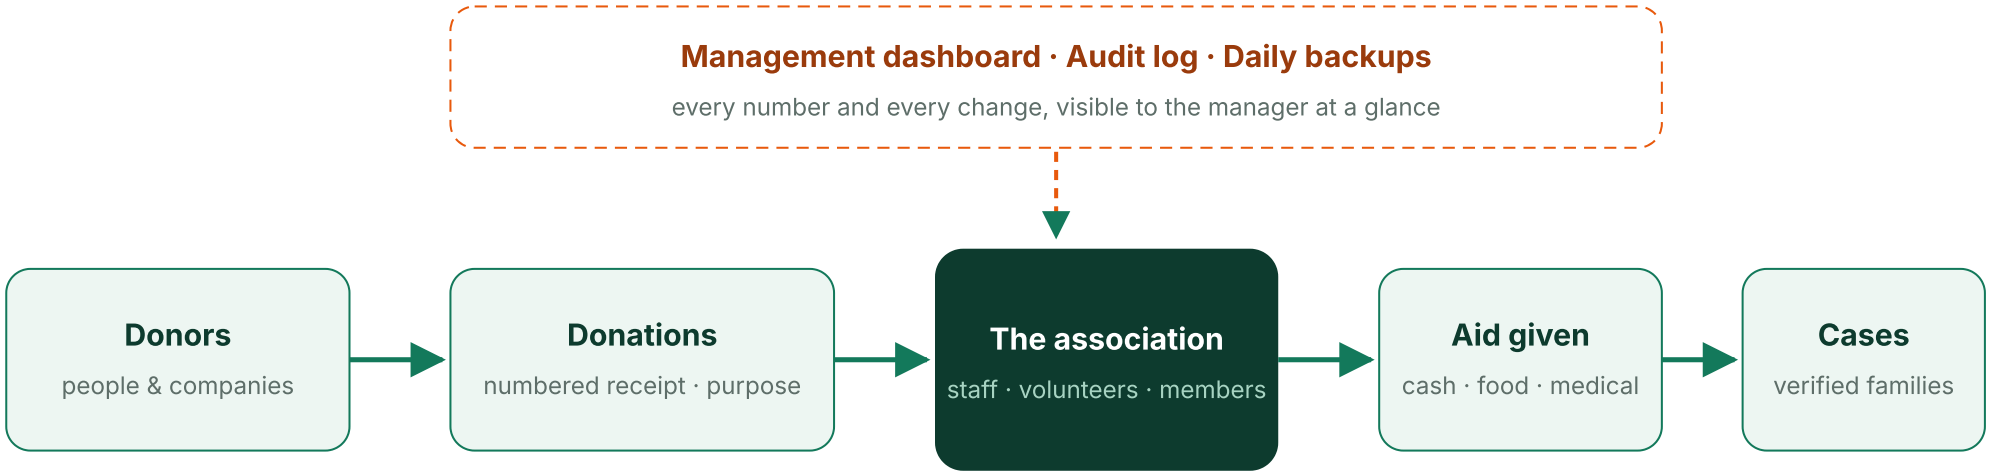

When an amount is changed or a record disappears, nobody can say who did it or when. That's a trust problem with donors, auditors and the board.

Generic CRMs don't fit

Commercial CRMs are built for sales pipelines, priced in dollars per user, English-first, and know nothing about zakat, national IDs or social research.

THE SOLUTION

One shared record of who gave, who received, and who did what

Register once, find instantly

Every donor and family has one file with their full history and running totals. Search by name, phone, national ID or area.

Safeguards built in

14-digit national ID check, duplicate IDs refused, required fields enforced, and amounts must be positive.

Receipts in one click

Automatic receipt numbers per year (R-2026-00001…) and a printable receipt with donor, amount and purpose.

Live management view

This month's and this year's income and aid, a month-by-month comparison, giving by purpose, and members behind on dues.

Accountability

Staff and admin roles, account lockout, automatic logout, and an audit log of every change with old and new values.

Fits how charities really work

Zakat, zakat al-fitr, sadaqa, orphan sponsorship, Ramadan boxes and udhiya are built in. Social-research notes sit with each case.

Sign in: every person has their own account and role

1. Each employee enters their own **username**…
2. …and **password** (minimum 8 characters, stored only as a secure hash).
3. **Sign in.** On the very first start, the program instead asks the association to create its administrator account. No IT setup is needed.

Two roles

STAFF	Register and update donors, donations, cases, aid, volunteers and members.
ADMIN	Everything staff can do, plus: delete records, manage user accounts, read the audit log, download backups.

Security by default. Five wrong passwords lock the account for 15 minutes; idle sessions log out after 30 minutes.

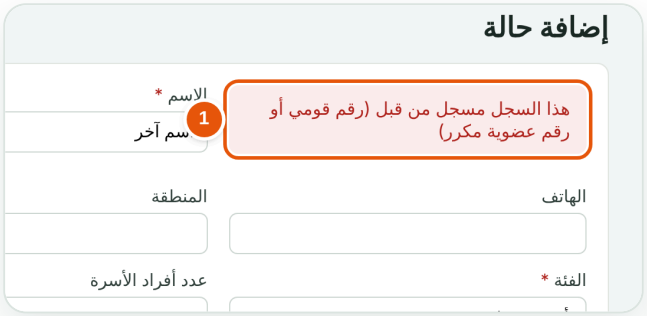

Register a case in under a minute, with no duplicates

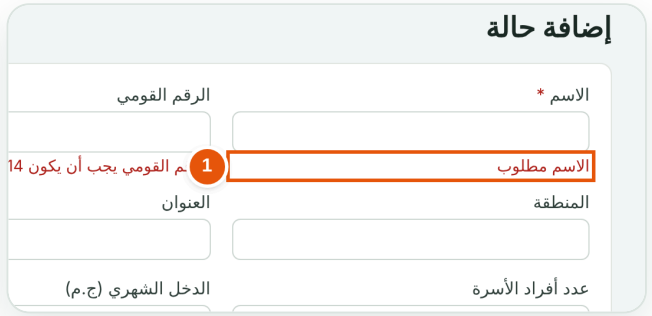

1. **Name** of the head of family or individual.
2. **National ID**, checked for 14 digits and refused if already registered.
3. **Category**: needy family, orphan, widow, elderly, person with disability, patient, student.
4. **File status**: under study → approved, rejected or suspended.
5. **Social-research notes**: what the field visit found.
6. **Save.** The case gets its own file immediately.

New case form (fictional data).

A second registration with the same national ID is refused.

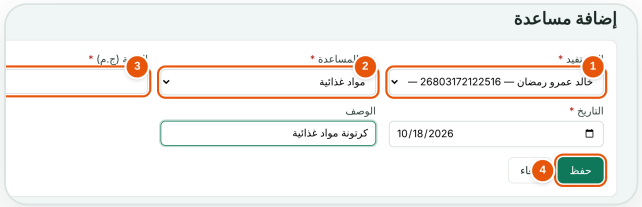

Missing or malformed data is flagged before saving.

The case file: every pound of aid, in one place

1. **Give aid** straight from the family's file. The form opens with the family already selected.
2. **Edit** the file as circumstances change. Every edit is logged.
3. **Aid history**: date, type and value of everything the family has received, with the running total.

> **Why it matters:** before approving new help, a researcher sees in seconds what the family already received this year. Fair distribution becomes the default, not an effort.

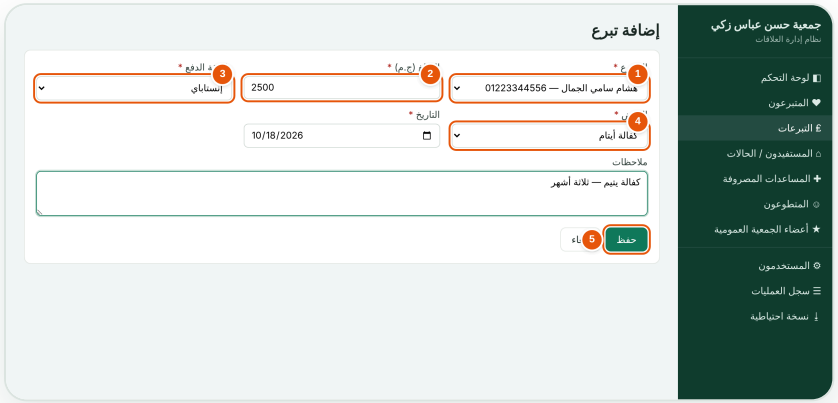

Giving aid: family pre-selected, type and value.

Donors and donations: from first gift to printed receipt

① Register the donor once: individual or company, phone, address.

② Record each gift: amount, payment method (cash, bank, InstaPay, wallet, cheque, in-kind) and purpose.

③ The donation gets the next receipt number automatically.

Purposes built for Egyptian giving: general, zakat al-mal, zakat al-fitr, sadaqa, orphan sponsorship, medical, education, Ramadan food boxes, udhiya. The list can be adjusted per association.

A proper receipt for the donor, a full history for the association

جمعية حسن عباس زكي

إيصال استلام تبرع

رقم الإيصال	R-2026-00189	التاريخ	2026-10-18
استلمنا من	هشام سامي الجمال		
مبلغ وقدره	**2,500.00 جنيه مصري**		
طريقة الدفع	إنستاباي	وذلك قيمة	كفالة أيتام
ملاحظات	كفالة يتيم — ثلاثة أشهر		

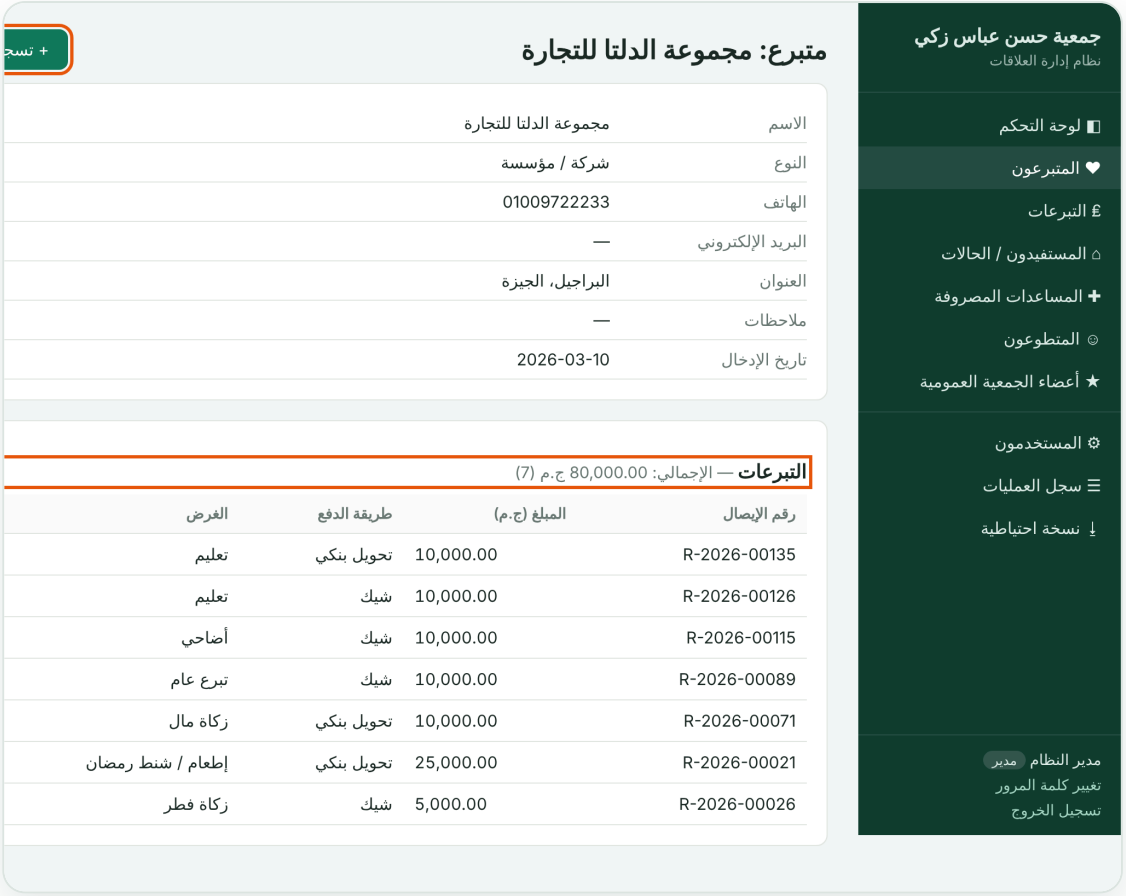

المستلم: مدير النظام

التوقيع / الختم

جزاكم الله خيراً

طباعة رجوع

Printable receipt: numbered, dated, purpose stated, received-by and stamp lines. Logo and registration details are a small addition.

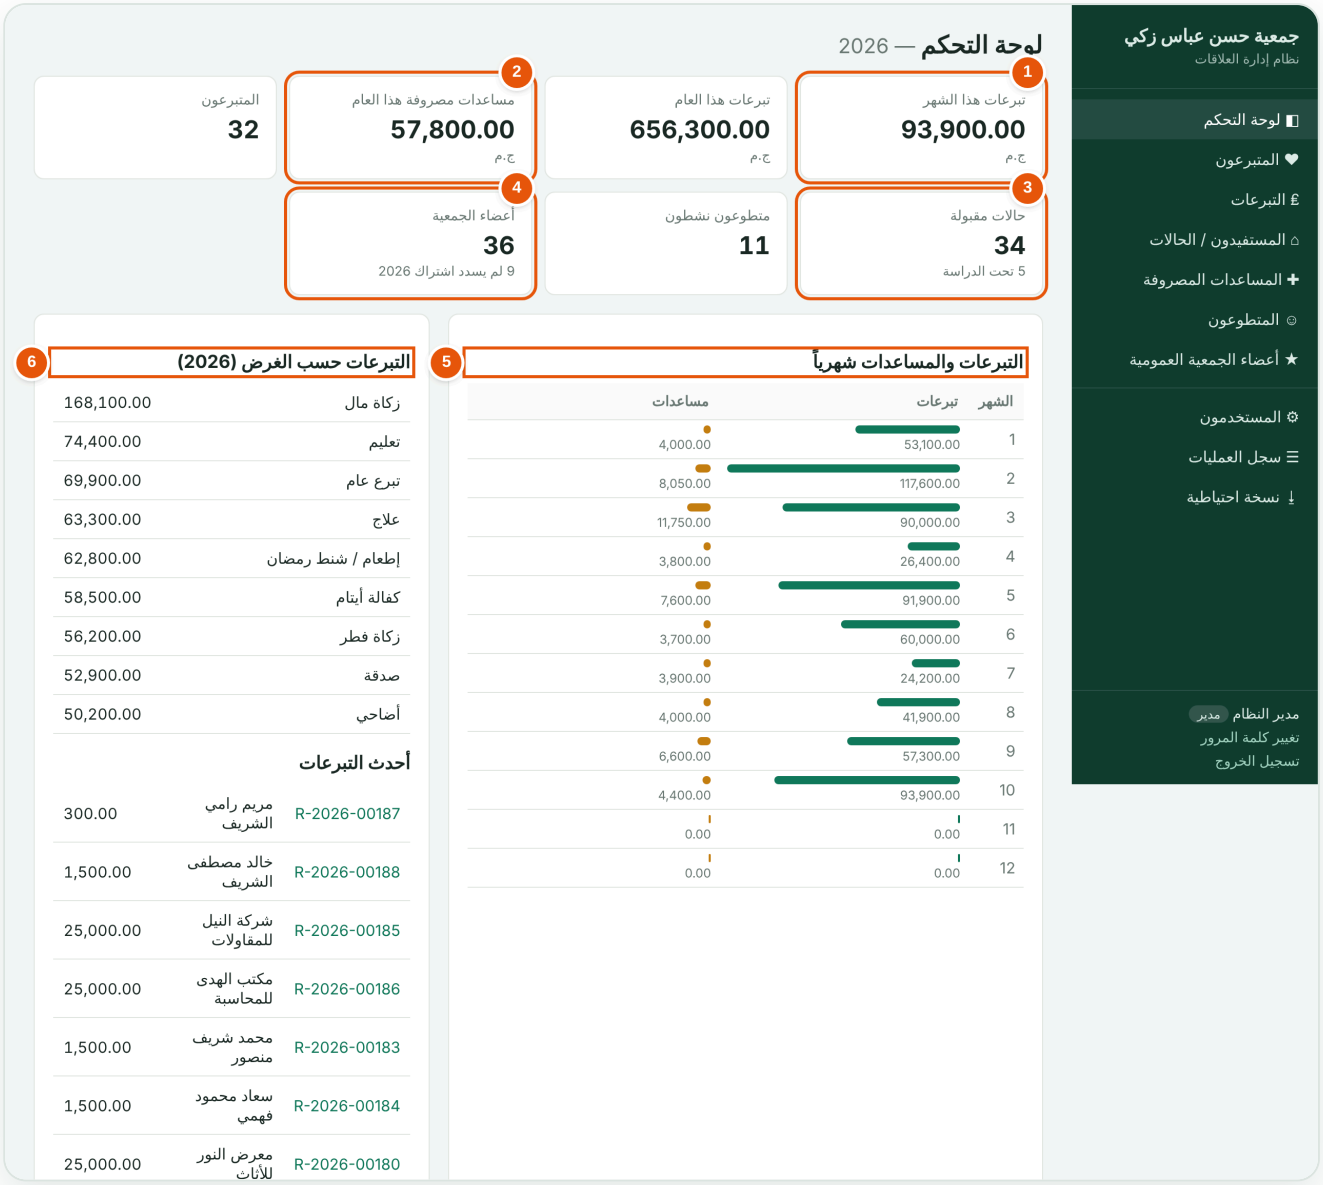

Donor file: every gift, with the total. Useful for thank-you calls, year-end statements and spotting lapsed donors.

The management dashboard: the whole association on one screen

1. **Donations this month** and this year, in EGP.
2. **Aid given this year**, to compare against what came in.
3. **Approved cases**, and how many are still under study.
4. **General-assembly members**, and how many haven't paid this year's dues.
5. **Month by month**: donations (green) against aid (orange). The Ramadan and Eid peaks are visible at a glance.
6. **Giving by purpose** this year, plus the latest receipts.

> **No reports to prepare.** The numbers update the moment a donation or aid is saved.

Find anything, export to Excel, and know who changed what

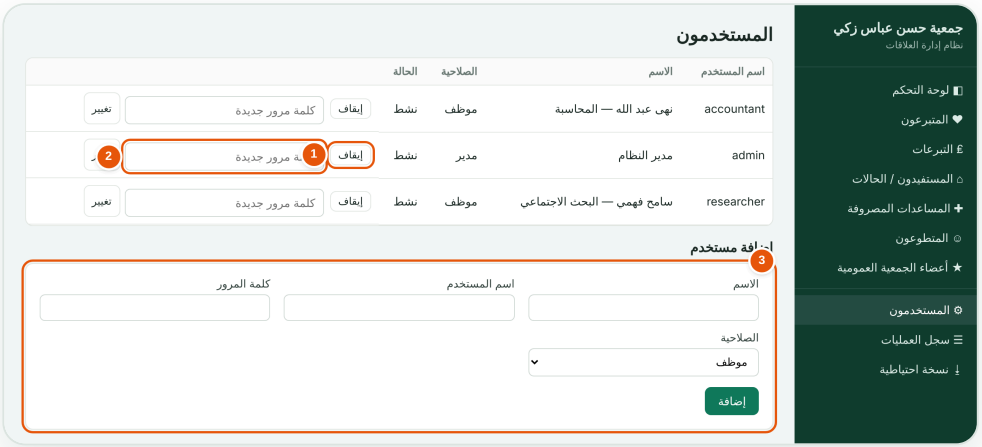

Search every list. Here: all cases in one area. Cases are searchable by name, national ID, phone or area.

Audit log (admin): every login, addition, edit and deletion, with user, time, and old → new values.

One-click Excel export of any list, with Arabic preserved, for the board, the auditor or the Ministry.

User management (admin): add staff, deactivate leavers, reset passwords.

HOW IT IS DELIVERED

Starts on one office PC; grows to the cloud without re-entering anything

1 · Single PC

HAZ-CRM.exe: a Windows program with no installation and no internet. Data stays on that computer, with automatic daily backups (last 30 kept).

2 · Office network

HAZ-CRM-Server.exe on one PC; every other office PC uses a normal web browser. Zero cost.

3 · Cloud

The same app on a rented server behind automatic HTTPS, with a PostgreSQL database that is never exposed to the internet. Staff can work from branches or home.

Engineering already in place

- Automated test suite run on every change, against both SQLite and PostgreSQL.
- Windows programs built and smoke-tested automatically on GitHub's Windows machines.
- One-command migration from the local file to the cloud database, and back.
- Docker setup for the cloud: HTTPS via Caddy, database health checks, Cairo time zone.
- Security: hashed passwords, CSRF protection, lockout, session timeout, security headers, audit log.

Built to be adapted quickly

- Fields, Arabic labels and drop-down lists (purposes, aid types, categories) are defined in one central file, so most changes take minutes, not weeks.
- Name, colours and receipt wording are small per-association changes; logo support is next on the list.
- Sample-data mode for demos and staff training. All data in it is fictional.

Data protection: beneficiary files contain health, financial and children's data. Local or Egypt-hosted deployment avoids cross-border transfer questions under Law No. 151 of 2020.

WHERE IT STANDS

Working product today; clear path to a multi-charity platform

CAPABILITY	STATUS
Donors, donations, numbered receipts	Built & tested
Cases, national-ID checks, aid history	Built & tested
Volunteers, general-assembly members and dues	Built & tested
Management dashboard, search, Excel export	Built & tested
Roles, audit log, lockout, backups	Built & tested
Windows desktop, office server, cloud (Docker)	Built & tested
Use by the association's staff with real data	Pilot next
Printable monthly / annual reports	Roadmap
Type-to-search pickers, date filters	Roadmap
Document attachments (IDs, research forms)	Roadmap
SMS / WhatsApp receipts and thank-yous	Roadmap
Many associations on one hosted service	Not yet
Mobile-optimised layout	Not yet

Roadmap

1. **Pilot** with the Hassan Abbas Zaki Association: their branding, receipts and real categories; staff training with sample data; real data on a secured PC.
2. **Operations pack**: monthly treasurer report, donor year-end statements, date filters, faster pickers, document attachments, approval step for aid.
3. **Engagement**: SMS/WhatsApp receipts, recurring sponsorships with reminders.
4. **Platform**: one hosted service serving many associations, each with its own isolated data, branding and users; Egypt-hosted.

> **The ask of a pilot is small:** one PC, one administrator, and a month of real use. That is what turns this walkthrough into evidence.
